

I can use a number of different sources to find out information about the rainforests

The Forest Conservation Workers Task

Forest Conservation Workers are in charge of monitoring trees and forests, for example, carrying out surveys of trees in the rainforest.

This is a survey that was carried out in the Australia to show the heights of all the plants and trees in 10m² of the Australian rainforest.
Can you finish my table and use it to answer the questions.

Height in m	Tally	Frequency
0-9		41
10-19		
20-29		4
30-39		8
40-49		
50-59		
60-69		
70-79		

The Zoologist Task

Zoologists study animals and their behaviours.
As you know there are thousands of different animal species living in the rainforest. Can you sort the animals into their correct habitats?

Extra Challenge - Can you add anymore animals to the layers?

The Horticulturalist and Farmer Task

Horticulturalists study plants and give advice to farmers.
As you know, lots of different foods, originated in the rainforest, can you use the internet to search for the different plants/food and match the labels up to the correct pictures?

Extra Challenge - Can you find any other plants that originate in the rainforest?

The Botanist and Geographer Task

Botanists look at plants very carefully and gather information about where plants come from.

Can you use the information that has been gathered and the selection of atlases to plot the different plants on a map of the world?

Extra Challenge - Can you use a key to show what you have found?

To link to our 'BIG ME – what do I want to be?' week.

We moved around 5 tasks linked to jobs that you could do in the rainforest. We talked about the skills we would need and which job we would like to do.

The Researcher Task

Researchers are very good at finding out information.

Can you be a good researcher?

Use the information books to gather information about the plants in the rainforest?

Extra Challenge - Can you find out about a plant in the rainforest that has been used for medicine?
